

Kernel

Migrator for SharePoint

Troubleshooting Guide

Migration Details

If you do not have a particular template in the target, you need to publish or activate it by contacting the site administrator.

Explanation:

The template “*Collect signatures*” is present in the source and the target; so, there is no issue in migrating the same from the source to the target.

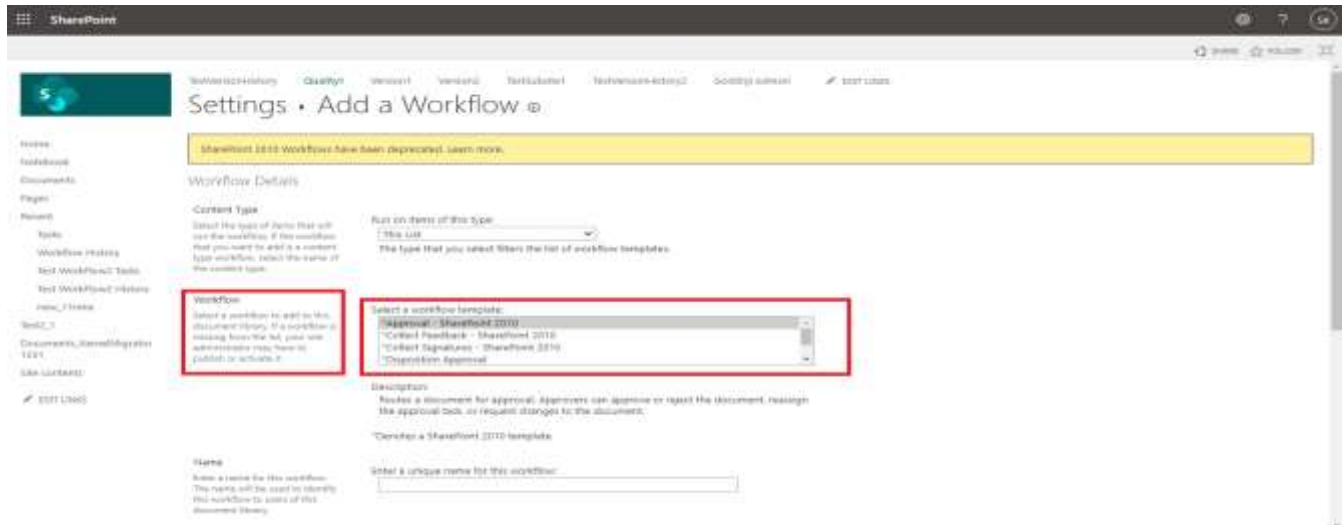

Figure 1:Source SharePoint

But the template “*Approval – SharePoint2010*” is not there in the destination. So, it will not be migrated from the source (as the template “*Approval – Sharepoint2010*” is not there in the destination). In this case, you need to create the “*Approval – Sharepoint2010*” template in the target too. For this, you need to publish or activate it by contacting the site administrator.
