

What's New

In Kernel Exchange Suite 20.3

This document describes the current updates in Kernel Exchange Suite

Introduction

Kernel Exchange Suite is a single platform for performing various functions like Exchange EDB/Outlook PST/OST recovery and migration processes. It lets you migrate user mailboxes (and shared mailboxes) from Exchange Server to live Exchange Server/Office 365 and export public folders, archived mailboxes, single/multiple, mailboxes, selectively with multiple options and filters.

The advanced tool supports almost all Exchange Server versions and Office 365 plans for migration and recovery processes.

The updated Kernel Exchange Suite version, 20.3 ensures improved calendar performance (date filter), faster and more efficient Exchange mailbox and public folder recovery, and migration support even to the versions in both source and destination.

Latest Enhancements

Kernel Exchange Suite 20.3 comes with these updates:

- Improved performance in terms of speed and accuracy
- Easier options and filters for selective migration
- Easier calendar selection in date filter
- Support for the latest Exchange Server versions and Office 365 subscriptions

The new version updates ensure quicker, flexible and efficient migrations, making the tool more useful for users.
