

WHAT'S NEW

v23.1

Kernel IMAP to Office 365

Introduction

IMAP to Office 365 migration tool is designed to migrate mailboxes from various IMAP clients such as Gmail, Yahoo, Amazon WorkMail, etc. to Office 365 and Exchange Server. The software supports migration to both hosted and on-premises Exchange deployments. The tool comes with an interactive user interface to complete migration process smoothly within few steps.

For convenience, IMAP to Office 365 migration tool incorporates a feature to add multiple source and destination mailboxes using a CSV file. This CSV file should contain source and destination login details along with mapping information. You can import this CSV file to the tool to automate the migration.

Updates

-➤ Offers modern authentication with 2-factor or multifactor authentication.
-➤ A smooth migration from IMAP to Office 365 Groups.
-➤ Error-free IMAP and Office 365 logins after bug fixes.
-➤ Increased migration speed with complete data integrity.
-➤ Enhanced migration performance, accuracy, and success rate.
-➤ Support for all IMAP servers and Office 365 plans.

These additional features in the new version of the Kernel IMAP to Office 365 tool have made the migration process rapid and even more secure.
