WHAT'S NEW

v23.2

Kernel Migrator for Exchange – Express
Edition

Introduction

Kernel Migrator for Exchange is a powerful migrator tool which can access mailboxes from Exchange Server (on-site, hosted, and online) and migrate them directly to another Exchange Server or Office 365. It supports each version of Exchange Server (including the latest Exchange Server 2019) and Office 365.

Kernel Migrator for Exchange helps you perform a pre-migration analysis and start the migration instantly. You can also perform some optional jobs like pre-migration analysis, GAL synchronization, etc.

Updates

- Quickly fixes bugs to ensure trouble-free server logins without errors.

- More powerful algorithms for easy and secure migrations.

- Ability to migrate Office 365 Groups using modern authentication.

- Increased migration speed for faster and more efficient migration process.

- Support for all Exchange/Office 365 plans and all type of migrations.

These latest updates in the new version enhance the capabilities and performance of the Migration tool.
