

What's New

In Kernel for Office 365 Migrator for Lotus Notes 17.0

This document describes the latest enhancements to Kernel Office 365 Migrator for Lotus Notes

Introduction

Kernel Office 365 Migrator to Lotus Notes is known for its flawless migration from NSF files (Lotus Notes/Domino Server) to Office 365. It is integrated with two scan modes – Standard Scan and Advanced Scan. It is a user-friendly tool that any non-technical user can easily use.

The tool can migrate unlimited NSF files including items like contacts, journals, calendars, sent mails, etc. to Office 365 concurrently using CSV files. Also, the tool allows to filter the mailbox data as per date range for a selective migration. And finally, it offers saving the files in three formats – TEXT, HTML, and RTF.

Latest Enhancements

Kernel Office 365 Migrator for Lotus Notes Version 17.0 has the following updates:

- Easy and fast migration of NSF files without any glitch.
- Easily migrate large-sized files.
- Users can preview the message body of NSF files with actual formatting.
- Supports all Windows versions.

These new features improve the efficiency and accuracy of NSF to Office 365 migration.
