What's New

In Kernel SQL Backup Recovery

This document provides recent updates to Kernel SQL Backup Recovery Version 20.12.

Introduction

Kernel SQL Backup Recovery is a professional tool to retrieve SQL database files from healthy or corrupt backup files.

It restores MDF and NDF files from BAK files, offers a preview, and then saves to live SQL Server or a Batch file. It is a simple tool with a friendly GUI and supports all SQL Server versions, including SQL Server 2019.

The latest version is more efficient after bug fixes and feature enhancements.

Latest Updates

Kernel SQL Backup Recovery, Version 20.12, has the following updates.

➢ Faster and smoother SQL backup recovery process

➢ Fixed minor issues to improve the efficiency

➢ Improved support for the latest versions

The latest updates in the SQL Backup Recovery tool make it a more useful tool for SQL administrators.
