

What's New

In Kernel for Exchange Server Recovery 18.4

This document describes the latest enhancements to Kernel for Exchange Server Recovery

Introduction

Kernel for Exchange Server Recovery is a business-friendly exchange database recovery software which can recovery exchange mailbox from a corrupt exchange database file.

It also supports migration from Live Exchange, Outlook Profile, and Office 365 (Exchange Online). You can also select multiple destination like PST file, Live Exchange, Outlook Profile, Office 365, and Public Folder.

The migration process can be completed via multiple methods as copy-paste, drag-and-drop, export to PST/MSG/EML, copy All mailboxes, etc.

Latest Enhancements

Kernel for Exchange Server Recovery Version 18.4 has the following updates:

- Enhanced recovery capability by supporting recovery of Exchange Server 2019.
- Save Exchange/Office 365 mailbox to PST with email address or mailbox name as the name of the PST file.
- Faster conversion speed after some minor bug fixes.

These new features improve the efficiency and accuracy of EDB to PST migration.
