

What's New

In Kernel for Lotus Notes to Outlook –Version 19.2

This document embraces the latest updates to Kernel for Lotus Notes to Outlook

Introduction

Kernel for Lotus Notes to Outlook, ver. 19.2 migrates the Notes and Domino Server NSF files data to Outlook PST file and Exchange Server smoothly in 3-4 simple steps.

It migrates only required data with useful filters like Date range, Mail categories, Folder filters, Folder exclude/include filters, split PST, etc.

The updated version, Kernel for Lotus Notes to Outlook, 19.2 is now integrated with powerful programs that has improved the migration speed. Some small bugs are fixed to improve calendar saving feature. A new feature is included that allows to mark all the selected items for migration as read or unread before the migration so as the status remains same at the destination.

Latest Enhancements

Kernel for Lotus Notes Version 19.2 has the given updates:

- **Provision for specifying status of all migrated messages as Read or Unread prior to migration**
- **Speedy migration with more accuracy after improvements in algorithms**
- **More efficient Calendar saving**

The latest update has made migration faster and more convenient with new features and advanced programming.
