What's New

In Kernel for Lotus Notes to Outlook

This document includes the recent updates to Kernel for Lotus Notes to Outlook, v21.5.

Introduction

Kernel for Lotus Notes to Outlook converts or exports Notes, SmartCloud .nsf, and Domino files to Outlook .pst files and Exchange Server efficiently.

It offers automated mapping, bulk migration (using CSV file), date range filters, split PST option, folder exclude/include option, etc.

The latest update to the Kernel for Lotus Notes to Outlook tool, version 21.5, has got some minor bugs fixed.

It performs more accurate email field conversion and includes a new feature for adding domain address to email fields.

Latest Updates

Kernel for Lotus Notes to Outlook, Version 21.5 contains the following updates.

➢ New Advanced Settings Translation feature to add email domain to email fields (where only display name appears)

➢ Improved email field conversion

➢ Minor bugs fixed to improve data saving, efficiency, accuracy, etc.

➢ It accurately migrates folder hierarchy

The latest updates in the Kernel for Lotus Notes to Outlook v21.5 ensure more accurate and convenient migrations.
