

WHAT'S NEW

IN KERNEL for Novell GroupWise to Exchange 17.0

The document introduces the significant up-gradations made in the released Kernel for Novell GroupWise to Exchange Version 17.0

Introduction

Kernel for Novell GroupWise to Exchange is the comprehensive application offering right solution for migrating Novell GroupWise mailboxes to the productive Exchange Server or MS Outlook. Its user can make use of the integrated real-time GroupWise Server connectivity options, i.e. Default, Login, and Command line modes that further helps in establishing the remote connection with GroupWise mailboxes. With the release of Kernel for Novell GroupWise to Exchange upgraded version 17.0, the software can successfully perform email migration effectively and in a very quick time.

Latest Enhancements

Kernel for Novell GroupWise to Exchange Version 17.0 too has got the following features:

- Improved Proxy Access feature that offers better connectivity support for bulk users of Novell GroupWise.
- New and improved interface for effective connectivity and migration of data to Exchange Server 2013/2016 and Office 365.
- Better compatibility with the latest GroupWise version: 2014.

The software in its latest version guarantees to deliver adequate results along with unforgettable user experience.
