In Kernel for VHD Recovery –Version 18.4

This document introduces the latest updates and improvements to Kernel for VHD Recovery

Introduction

Kernel for VHD Recovery version 18.4 recovers all types of corrupted VHD and VHDX files more efficiently.

Its advanced scanning modes fetches out data from large as well as corrupted VHD and VHDX files.

The tool offers selective recovery of VHD data and now saves recovered VHD data of size 250 MB free with its Trial version.

The updated version is more robust with advanced features for VHD data recovery.

Latest Enhancements

Kernel for VHD Recovery Version 18.4 has the following updates:

- **More simple and interactive Graphical User Interface**
- **Saves up to 250 MB recovered data free with the Trial Version**
- **Better performance with the improved scanning modes**
- **Exact recovery of VHD/VHDX data with enhanced algorithms.**

These recent upgrades have made the tool more effective for VHD recovery.
