WHAT'S NEW

# v24.0

**Kernel Google Workspace
Backup and Restore**

# Introduction

The Google Workspace Backup and Restore tool backs up G Suite mailboxes, appointments, & Google Hangouts/Chats to local systems safely. It backs up multiple mailboxes using a CSV file or Super Admin Account. Also, it provides filters and reports.

You can backup multiple mailboxes either with a CSV file or using a super admin account. You can import a CSV file to the tool with the details of all the mailboxes to backup them. Also, using a super admin account, you can back up all the mailboxes under it.

Kernel Google Workspace Backup and Restore tool can run many backup tasks simultaneously. All the tasks will be executed separately. This helps to complete the migration project faster.

# Updates

→ Quicker Backup of large-sized G Suite mailboxes with complete emails.

→ Smoother G Suite contacts and calendar items.

→ Better selection of G Suite mailboxes for migration.

→ Enhanced backup speed for non-email items.

→ Better user-interface for G Suite accounts.

These new features improve the efficiency and accuracy of G Suite Backup.
