

WHAT'S NEW

v24.1

Kernel Google Workspace to  
Office 365

# Introduction

Kernel Google Workspace to Office 365 is an ideal platform for a safest migration between two tech giants – Google and Microsoft. The mailboxes from Google Workspace accounts are migrated to Office 365 mailboxes securely and completely. There are ample number of filters to choose only the necessary parts of mailboxes and migrate them quickly.

There are simple methods to connect with single or multiple mailboxes and there is a help guide present in the login page to help the user in creating correct credentials for login.

The second module in the software is a special service to migrate Chats and spaces from Chat application in Workspace accounts. It migrates such chats to Microsoft Teams application. The module is designed to move important communications between team members, businesses, managers, or even individuals.

## Updates

- ➔ New module to migrate Workspace chats to Microsoft teams.
- ➔ Connect with Workspace account using Super Administrator, Service Account and P12 key.
- ➔ Connect with Office 365 account using Tenant ID, Client ID, Client Secret Value, Email Address, and Password.
- ➔ Simpler mapping between source and destination accounts.
- ➔ Save the migration report in CSV format.
- ➔ See the migration logs to check the minute details of each process.

The latest features of Kernel Google Workspace to Office 365 tool will help the businesses in migration subtle but important information present in the Chats and Teams platforms in the minimum time.
