v23.2

Kernel Import PST to Office 365

Introduction

Kernel Import PST to Office 365 is an advanced solution to quickly import PST data to multiple mailboxes and Office 365 Groups.

It comes with a simple user interface that facilitates import in just four simple steps – Add PST file, Add Office 365 account, Map PST files to mailboxes, and Import PST files. There is no need of any technical expertise to do this. Moreover, PST files can be imported to Exchange or Office 365 even if you don't have Outlook installed on your system.

The tool also offers innovative filters to skip duplicate items, empty folders, and deleted folders to ensure fast migration.

Updates

-➤ Import PST files to Office 365 Groups using modern authentication process.
-➤ Increased migration speed with more accuracy.
-➤ Offers improved security and error-free login process for secure migration.
-➤ Improved performance with complete data integrity for the import process.
-➤ Support for the latest PST formats and all Office 365 plans.

These additional features in the new version of the Kernel IMAP to Office 365 tool have made the migration process rapid and even more secure.
